Shaped for **your**
world of hearing

oticon
PEOPLE FIRST

Empowering your life with a hearing solution as **individual** as you are

Everyone hears differently. The way we each perceive sounds and their subtle nuances is highly personal to us. That is why it's important to have a hearing instrument specifically adapted to your hearing needs and the way you would like your world to sound.

Powered by a unique combination of advanced audiological features, Nera2 is the best performing mid-level hearing solution we have ever created. Nera2 instruments work together, wirelessly coordinating instrument settings to work more naturally with how your brain and ears want to hear. For example, Nera2 instruments use microphones that can automatically focus on conversations you want to hear and reduce annoying background noise. Nera2 also enhances your sound experience with advanced whistling and feedback protection to prevent embarrassing squealing.

Once fitted by a hearing care professional, and shaped to your individual hearing needs and sound preferences, Nera2 will provide good sound quality and improved speech understanding.

Improved speech understanding

The key to Nera2's excellent sound quality is the tiny but extremely powerful Inium Sense sound processing chip. It's our fastest processor ever and it enables Nera2 to process a huge range of different sounds, sending more high quality information to your brain. This enables you to understand conversations and soft speech better, even in noisy environments.

Reliably exceptional

Nera2 can be counted on to perform in a variety of situations thanks to a design proven in rigorous testing. The instruments are designed to help keep water, dust, and debris out, and all key components are coated to combat moisture-related issues.

Do you experience tinnitus? Nera2 can help.

Many people with hearing loss experience tinnitus as a ringing in their head. You might also experience tinnitus as a buzzing, humming or whistling sound or even the sound of chirping crickets, as tinnitus can take many forms. Even though there is no known cure, tinnitus doesn't have to interfere with your enjoyment of life. Your Nera2 hearing device with Oticon's Tinnitus SoundSupport™ feature can be programmed to create customized relief sounds that may minimize the irritating effect your tinnitus sounds have on you. Ask your hearing care professional about Nera2's Tinnitus SoundSupport™ capabilities*.

*Not available on all Nera2 models.

Nera2 is also available in other custom styles.

We all have a different relationship to sound. That is why your hearing care professional is the key to ensuring that you get the absolute most out of Nera2's technologies and personalized features.

Your hearing care professional will work with you not only to identify sounds you can or cannot hear, but also to gain a better understanding of the listening situations that are important to your life. In what circumstances do you most want help hearing? What are the situations where you would like to play a more active role?

This unique fitting process is designed to create truly personalized hearing care. It shapes Nera2 to meet both your hearing needs and the lifestyle you desire, and it enables you to interact more naturally and comfortably throughout the entire day.

STAY IN THE LOOP, **EVERYWHERE**

There's no feeling quite like being fully involved in the world around you, and Nera2 – used together with ConnectLine – allows you to connect easily and wirelessly.

ConnectLine streams sound from devices such as your telephone or TV to your Nera2 hearing instruments, all in one integrated system. With ConnectLine you can stay closely connected with loved ones on a landline phone*, cell phone or with video chat. You can even watch TV* and listen to music in the company of others at a volume that is comfortable for everyone.

Easy to set up and simple to use, Nera2 and ConnectLine can be tailored specifically to your needs and preferences, so that operation is intuitive.

* Requires additional
ConnectLine accessories
